RA-WIS Early Rheumatoid Arthritis Work Instability Scale

A Work Instability Scale questionnaire consisting of 23 statements made by people who are working with Arthritis, together with Scoring and Guidance for use in the clinic.

A Work Instability Scale questionnaire consisting of 23 statements made by people who are working with Arthritis (RA-WIS). Answers are given using a binary TRUE / NOT TRUE format dependent on whether they apply to the respondent. RA-WIS is a simple, validated screening tool for Work Instability (the consequences of a mis-match between an individual's functional ability and their work tasks). This is a self-administered measure enabling the monitoring the risk of Work Disability in rheumatoid arthritis patients.
